## **Layflat Margin – applies to all HD Photobook sizes**

The layflat margin is **12mm** per single page.

**3mm** of the 12 mm layflat margin is copied from the left and right single designed pages and included on the opposite page.

**e.g.** copy 3mm from the right side of the left designed page onto the left side of the right designed page and vice versa.

This is done in order to create bleed in the centre/spine of the book.

The remaining **9mm** of the 12mm layflat margin is plain white. This allows enough space for the spine to be binded properly.

**Please note:** When designing a HD Photobook in the C&P desktop software the layflat margin will be added automatically during the rendering process.
